## Steam locomotive Rh 109 / 209 / 38

The Österreichische Südbahn Gesellschaft commissioned this shapely locomotive starting in 1910 for the express trains that were getting heavier and heavier on the main line Vienna- Triest. From 1910 - 1914 a total of 44 locomotives were delivered for the Austrian net of the Südbahn by the locomotive factory of the StEG (Österreichisch-Ungarische Staatseisenbahngesellschaft) in Vienna, the locomotive factory Wiener Neustadt and the Viennese locomotive factory Floridsdorf. After the Austrian part of the Südbahn was nationalized in 1923 the 17 locomotives were acquired by the Österreichischen Bundesbahnen (formerly BBÖ) and registered as series 209 because the number 109 was already taken. The Deutsche Reichsbahn took over all 17 locomotives of the BBÖ in 1938 as series 38.41. The decommissioning of the last Italian locomotives from the series 653 took place in 1940 after the railway line from Triest to Udine and Venice had been electrified. The ÖBB transferred another 11 locomotives into the new numbering system as series 38. Some of the locomotives were still equipped with flue-tube throttling and a Giesel ejector which resulted in less coal consumption and more power output. In 1992 the serial number 38.4101 was restored by the Technical Museum Vienna as series 109.13 and it being kept in operating condition by the 1. Österreichischer Straßenbahn- und Eisenbahn-Klub (ÖSEK) in Strasshof. On the occasion of the railway anniversary (175 years of railways in Austria) Roco is manufacturing this model in H0 in several variations, with design considerations regarding the technique, simultaneously.

# Dear Roco model train friends,

It does not matter if you are electrified or if you are building up lots of steam: Our true to the original miniature editions of well known locomotives and wagons make the heart of every passionate model train fan beat higher. So that your model train collection can grow little by little and be rejuvenated with extraordinary technologies and innovations the development at Roco never rests. Our ambitious engineers leverage all of their knowledge and manual abilities to offer you trailblazing quality products of the extra class also in this catalogue. Leaf through, read, and browse through our unlimited product line and experience the unique variety in our programme. We wish you a lot of fun and a good journey in the future.

Your Roco Team

# The G 12 - Heavy freight locomotive scale TT

The G12 was developed on the basis of the G12.1 and a 2-10-0 locomotives that was built by Henschel for the Osmanic general management of the military railways (C.F.O.A.). Between 1917 and 1921 a total of 1168 locomotives were built for the Prussian State Railway. In addition to that the railways of Elsass-Lothringen ordered 118 machines, the Badische Staatsbahnen 98, the Saxon

42, and the Württembergische Staats-Eisenbahnen also 42 locomotives. Most of them in this series were taken over at a later point by the Deutsche Reichsbahn. Pretty soon the Deutsche Bundesbahn started to decommission the exemplars it owned (1953). Nevertheless the Deutsche Reichsbahn still had 300 machines in service by 1968 - the last locomotives were decommissioned in 1976.

The Roco model is a new design in metal/plastic mixed construction with many details.

**Item Nr. 36070 / 36071**

# Steam locomotive BR 23, DRG

Dieter Wünschmann

The Deutsche Reichsbahn had a new passenger train locomotive developed on the basis of the proven tank of the series 50. Originally it was designed as a stronger machine to follow up and replace the P 8 and G 10 with a boiler that could withstand higher pressure. However the two test locomotives from 1941 were not put into serial production because from 1942 on only types were in demand that were important for the

war effort. After 1945 the two prototypes ended up at the DR whereas the 23 001, from then on as the 35 2001-2, was still in service until 1974 at the VES-M in Halle. They were used as break locomotives (with Reko boiler) and were equipped with a Riggenbach pneumatic break. Originally the machine was equipped with a Trofimov adjusting slide, however it proved to be unreliable and consequently it was outfitted with

a Winterthur pressure equalizer. In the 1950 it was put into service for a short time with a tender 2'2'T34 but because the water reservoir was not sufficient it got the one from the series 50. Amongst aficionados the 23 001 is considered as one of the most balanced and best designed steam locomotives of its time.

**Item Nr. 72250 / 78250 / 72251 / 78251**

# The series 85 of the DB.

The operation of the Höllentalbahn in the Black Forest with its inclines was very involved because of the cogwheel locomotives and so it was attempted to switch to a pure friction track as soon as possible. From 1932 to 1933 the Deutsche Reichsbahn Gesellschaft ordered ten heavy tender locomotives of the series 85 001 to 010 at Henschel in Kassel. The locomotives were stationed at the depot Freiburg and remained there with the exception of the 85 004 which was destroyed in the Second World War. When the switch was made at the Höllentalbahn from the electric test operation with 20 kV/50 Hz to the standard 15 kV/16 2/3 Hz of the Deutsche Bundesbahn in 1961 it lead to the decommissioning of eight of the locomotives. The 85 007 was still operating for another year on the steep incline ramp Erkrath - Hochdahl between Düsseldorf and Wuppertal before it was decommissioned also. In 2012 the Höllentalbahn has its 125th anniversary and it is a timely occasion to set this tender steam locomotive an appropriate memorial in the track H0. The DB-AG is also planning to have a few events for the celebration of the scenically interesting Höllentalbahn.

Item Nr. 72270 / 78270

Michael Meinhold

# Electric locomotive Re 4/4" of the SBB

The Re 4/4" is a proven multi-purpose locomotive of the SBB and was built from 1964 until 1985. With a total of 277 delivered locomotives it is the largest series of driving vehicles in Switzerland and is amongst the best known and most

successful machines in the passenger and freight divisions. The Re 4/4" was modernized and refitted throughout several years. Some interesting versions of this shapely locomotive have been actualized at Roco.

# The „Schürzenwagen“ of the DB

Because of the good experiences with the fast railcars and the Henschel-Wegman-train the DRG simultaneously ordered express train wagons for the long distance traffic with a high aerodynamic value. The first five prototypes of the „Schürzenwagen“ were delivered to the Deutsche Reichsbahn in 1936 as C4ü-36. After the test run was declared a success 18 additional vehicles of the

series AB4ü-38 (64551) and 27 C4ü-38 were ordered. The sleeper and dining car operator MITROPA had also wagons in the „Schürzenwagen“ design developed. Other than the wagons with seats installed, the dining cars that were developed by WUMAG in Görlitz in 1937, were supposed to be 26 meters long. However in 1939 the standard length of 23,5 meters for these vehicles became mandatory.

The WR4ü-39 (64553) was very heavy with its 51 tons and because of that the bogies of the type „Görlitz III schwer“ were retrofitted with a fourth seat suspension. The large family of „Schürzenwagen“ will be on the ‘menu’ of Roco for some time to come.

**Item Nr. 64550 (1st class) / 64551 / 64552  
(2nd class) / 64553 / 64554 (luggage wagons)**

## Bella Macchina ! The E 626 of the FS

The series E 626 was the first standard locomotive for the 3-kV-Direct Current System at the Italian State Railway. The machine was ordered at Tecnomasio Italiano/BBC and was based on the E 625 series. This locomotive was used primarily in front of passenger and freight trains and operated all over Italy, in the North as well as in the South. This old-timer was still in service for freight trains at the Italian State Railway until 1999. Roco brings this distinctive and amongst the Italian electric locomotives best known machine as a new design in H0 on the market.

**Item Nr. 72640 / 72641 / 78641**

More information you will find on Pages 140/141.

Harald Herdin

## The series 2143 of the ÖBB

After several test locomotives that were delivered by the Austrian locomotive industry and were either too big or too heavy for the planned field of operation, the ÖBB started in 1964 to commission a standard Diesel locomotive with a lower axle load. The order for 150 locomotives was divided between the producer Jenbacher Werke (JW) and Simmering-Graz-Pauker (SGP). In contrast to the later deliveries with a straight main frame running from front to end, the 2143.04-13 feature a long cranked beam that is bent downwards at the front end similar to the series 2043. After the pre-production machines 2143.01-03 the first production line series 2143.04-13 was delivered in 1966/67 which is the prototype for the new Roco-H0-model.

## The most often built Diesel locomotive in the world – series 770 of the ČD

The six axle heavy Diesel locomotive T669.0 (today 770) is known to all fans of this series by the nick name “bumble bee” (Czech “Čmelak”). It was not only its Diesel sound which was responsible for the name but also the external appearance that made it an important locomotive. The locomotive was an export order for the former Soviet Union - that is why in a time span on 31 years a total of 8200 Diesel locomotives were built: it is justifiably so regarded the most often built Diesel locomotive in the world. Its field of operation was the heavy shunting service and the transportation of local freight trains. After three prototypes were finished (1963)

they underwent extensive testing on the tracks of the ČSD. All the tests showed quite promising results and accordingly these machines were also operated in the country of origin, the Czech Republic.

**Item Nr. 72775 / 78775**

### “Čmelak” in Russian service

After the Czech and the Slovak versions there will also be models with a central buffer coupling taking the Russian prototype as an example. The denomination in Russian is ЧМЭ3 (CME3).

## Electric locomotive CC 6500, SNCF

Prototype: Electric locomotive CC 6500 of the French National Railways. The series of electric locomotives CC 6500 was slated to operate on the DC current network of the SNCF. When it started to operate in 1969 it was the most powerful locomotive of the French National Railways and was licensed for a top speed of 200 km/h. It was deployed in front of the most important trains in France as for example the Le Mistral, Capitot or l'Aquitaine but because of its enormous pull capacity it was also used for heavy freight trains.

## Imprint Roco New Product Catalogue 2012

We strive to provide the content of this catalogue with the highest quality. Despite of our best effort and the best possible care the Modelleisenbahn München GmbH is not liable and gives no warranty for the accuracy, the up-to-dateness or completeness of the contents and the information given in this catalogue. For eventual damages of material or ideal nature that result from the use, the non-use or the withholding of faulty or incomplete information in this catalogue - as far as it is not founded in demonstrable intent and negligence on part of the Modelleisenbahn München GmbH - no guarantee or liability can be given. We furthermore reserve the right to update the contents of the catalogue as well as the technical specifications of the contained products at any time. The copying of the identifications, trade brands, trade names or company names and other characteristics in this product catalogue does not justify the assumption that those can be used by everybody free of charge. It can rather be that it is a registered trade mark or characteristics otherwise protected by law even if these are not specifically marked up as such.

**The Addresses of our retailers can be found on our website [www.roco.cc](http://www.roco.cc)**

Distribution of our products and spare parts is effected by our model railway specialist dealers only.

**PRICE INDICATION:** The prices specified in the catalogue are the manufacturer's suggested retail prices at the time that the catalogue went to press. We explicitly reserve the right to make price adjustments at any time. **PUBLISHED BY:** Modelleisenbahn München GmbH, Triebstraße 14, 80993 München, Germany, [www.fleischmann.de](http://www.fleischmann.de)  
**PHOTO CREDITS:** Modelleisenbahn München GmbH, bluforce group, Zirn&Grötsch GmbH, Frank Zarges or the photographers listed directly below the pictures. **DESIGN AND COMPOSITION:** bluforce group, Petersbrunnstraße 19, 5020 Salzburg, Austria, [www.bluforce.at](http://www.bluforce.at) **PRINTING AND PROCESSING:** Niederösterreichisches Pressehaus Druck- und Verlagsges.m.b.H., Gutenbergstraße 12, 3100 St. Pölten, [www.np-druck.at](http://www.np-druck.at)

## Electric locomotive 101 060-2 of the DB AG – “60 years Federal Police”

On the occasion of the 60th anniversary of the federal police, the Deutsche Bahn congratulates with a new design of the series 101 060-2. The freshly decorated locomotive was officially introduced to the press during a special reception on August 25 2011 in Hamburg. The DB Fernverkehr AG uses it mostly for

service in front of InterRegio trains. Roco also congratulates the federal police to this round anniversary and releases an attractive model in the H0 scale.

## The electric locomotive BR 115 of the DBAutoZug GmbH – “80 Jahre Autozug”

Even late for more than a year the series BR 115 now displays the eye catching design with the slogan “80 Jahre Autozug” as planned. It was officially presented to the press on September 7 2011 in Munich. The car train had its round anniversary on April 1 2010 - however that was superseded by the much larger train anniversary: 175 years German Railway. But now it has become a reality and the DBAutoZug GmbH, a subsidiary of the Deutsche Bahn AG, utilizes the electric locomotive from the series 115 509-2 as an impressive advertising platform in front of car and night trains all over Germany as

well as in Austria. The display on the locomotive was designed by the well known artist and designer Gudrun Geiblinger who is also known for the Bundesheer- and the Arriva-Taurus. It is painted in anthracite metallic colours and displays a red sports car from the 1930's on either side. The model of the electric locomotive from the series 115 DBAutoZug is produced in a complex and multi pass printing procedure. With triple headlight and two red rear end lights. Overall length: 190 mm.
